5 July 1963

MEMORANDUM FOR: Assistant for Operations, NPIC
FROM: Assistant for Photo Analysis, PAG/NPIC
SUBJECT: [redacted] High Magnification Stereo-Viewer

25X1A

1. Re: the memorandum from Plans and Development, dated 25 June 1963.
2. After studying the other developments under contract referred to in the above memorandum, it is still felt by the analysts that at least three of the requested units should be obtained.
3. Although each of the other developments have merits, each appears to have certain limitations. Furthermore, there is no prototype for operating comparison. The [redacted] High Magnification Stereo-viewer is a very versatile and proven instrument. In addition to handling dual 70 mm rolls of film, the unit can handle up to 9 $\frac{1}{2}$ " film.
4. The unit being sought will be an improved version of the prototype now in use at Navy PIC. Production models should also be available at a much earlier date than of any of the others.
5. Time should be another consideration in the decision of whether or not to purchase these items.
